

Commsworld Broadband Solutions

Focussing on Business orientated Broadband requirements.

Key Business Needs –

- 8MB fast delivery
- Business focused network
- Excellent Technical Support
- Simple FREE Migration

8MB Delivery: -

2MB was the de-facto standard, but these days even faster downstream speeds of up to 8MB are available for any user, whether they are a home/small office user or a multi-user business. (subject to the Exchange being ADSL enabled and the distance from the Exchange to the end user).

Network:-

Commsworld works with Murphx Innovative Solutions, who were selected as a result of their business focused network design, including full voice prioritisation throughout the entire network.

Excellent Technical Support: -

The Commsworld offering is supported by our own experienced Service Desk team, with priority access to support from our network's engineers in the unlikely event that you encounter difficulties with your connection.

Value Add Services: -

There are many features that can be offered with the Broadband service, the most important considerations being: -

- Flexible levels of service - Commsworld is able to offer varying levels of contention and downstream speeds to suit your business requirements
- Unbundled products - our network partner has excellent UK coverage from multiple carrier networks
- Fixed IP addresses – these are required for devices and features such as Routers, Servers, VPN tunnels etc. Our offering includes a number of these within the monthly rental.
- NAT / Non-NAT delivery – important for the delivery of e-mail in either SMTP or POP3 format.

Pricing: -
